Berman's Pediatric Decision Making | ScienceDirect
Pediatric Neurology Needs Assessment Executive Summary Introduction A needs assessment was conducted to collect information about opinions, attitudes and preferences of key pediatric neurology stakeholders in the context of decision making. The focus of the assessment was on what the patient population needs to make better

Cases in Pediatric Acute Care | Wiley Online Books
As described by Nelson and Mahant, 5 a shared decision-making model is one in which the clinician explores the family’s values relating to a decision, uses those values to frame the evidence about available options, and collaborates with the family to determine which option is the best fit for their child.

The child’s capacity to engage and share in decision-making should always be considered . However, children with a neurologic impairment may also have cognitive impairment that prevents
them from participating in decision-making around health in a meaningful way.

**Decision Making in Pediatric Neurological Physical Therapy**
The decision-making process in pediatric deformity begins with appropriate diagnosis and classification of the deformity. Treatment decisions, both nonoperative and operative, are often predicated on the basis of the age of the patient and the natural history of the disorder.

**Pediatric Decision-Making Strategies - 2nd Edition**
The primary objective of this study was to evaluate the impact of genetic testing on clinical decision making in pediatric epilepsy patients. Methods. We completed a single-center retrospective cohort study of 91 patients (43 male) aged 19 years or less undergoing NGS with epilepsy panels differing in size ranging from 5 to 434 genes from October 2013 to September 2017.

**Impact on Clinical Decision Making of Next-Generation**
Shared decision-making is a process that helps frame conversations about value-sensitive decisions, such as introduction of assistive technology for children with neurologic impairment. In the shared decision-making model, the health care provider elicits family values relevant to the decision, provides applicable evidence in the context of those values, and collaborates with the family to identify the preferred option.

**Ethical decision-making for children with ... - Neurology**
This professional text engages a group of scientific, reflective practitioners in the task of elucidating the basis of their decision making for children with a variety of neurologic disorders commonly encountered in pediatric physical therapy.

**DECISION MAKING IN PEDIATRIC SPINAL DEFORMITY**
Schenkman and Butler 2 further elaborated on the disablement models to make them applicable to clinical decision making for neurologic physical therapist practice. To this end, the models of Schenkman and colleagues 2, 3, 5 draw attention to systems that may be impaired as sequelae of the injury or disorder for which the patient seeks treatment.

**Decision making in pediatric neurologic physical therapy**

**Decision making in pediatric neurologic physical therapy**
Recognition and mitigation of suffering is central to pediatric care, including the care of children with severe neurologic impairment (SNI). Medical decision-making for children with SNI often occurs in response concerns about suffering—whether in the present state or regarding concerns about potential suffering in the future.

**Decision Making in Pediatric Neurologic Physical Therapy**
An ethical approach to children and young adults with neuromuscular disorders in resource-limited settings. As recently as 2019, guidelines have made specific note of pediatric neuromuscular disorders with poor prognoses as a disease category that may be assigned a lower priority for critical care resource allocation in the setting of shortages. 28 The exclusion of large categories of
patients ...
